

*euCognition*

[www.euCognition.org](http://www.euCognition.org)

## **Final Review** **5<sup>th</sup> December 2008**

- 10:00 Welcome & Introduction: Hans-Georg Stork & David Vernon
- 10:15 Summary of the Activities of the Network: David Vernon
- 11:15 Coffee
- 11:45 Questions, Answers, and Open Forum: Executive Committee
- 13:00 Lunch
- 14:00 Review Team Meets
- 15:00 Preliminary Feedback: Hans-Georg Stork
- 15:15 Discussion and Clarification: All Participants
- 15:40 Concluding Remarks: Hans-Georg Stork & David Vernon
- 16:00 Close

# Brief Review of the Goals

## **Goals**

### **What is euCognition?**

FP6 Project 26408 (Coordination Action)

Funded by the European Commission  
Unit E5 - Cognition  
(now Cognitive Systems & Robotics)

**Cogsys**  
Cognitive Systems

Duration: 3 years ... 1/1/06 → 31/12/08

Budget: €1,599,916

## Goals

### What do we do?

Foster inter-disciplinary interaction: community building

Build the scientific & engineering foundations of cognitive systems

#### Facilitate

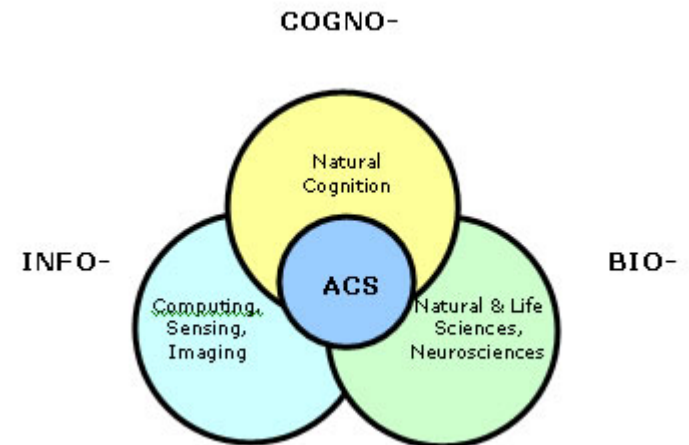

- Workshops
- Conferences
- Courses
- Exchanges of staff and students
- Development & dissemination of training material
- Access to development platforms
- Research planning
- ... but not research

## Goals

### Who is it for?

Open to anyone doing research in the many disciplines that address the issues of creating artificial cognitive systems including (but not limited to)

- Neuroscience
- Psychology
- Cognitive science
- Machine Learning
- Autonomous systems theory
- Cognitive robotics
- Mathematical modelling
- Cognitive Vision
- ...

## It's not a small small world ...

AI  
Psychology  
Neuroscience  
Non-linear dynamical  
systems theory  
Synergetics  
Autonomous systems theory  
Machine learning  
Pattern recognition  
Computer vision  
Haptic sensing  
Cybernetics  
Neural networks  
Epistemology  
Philosophy  
Language  
Semiotics  
Robotics  
Manipulation  
Communication  
...

### Difficulties:

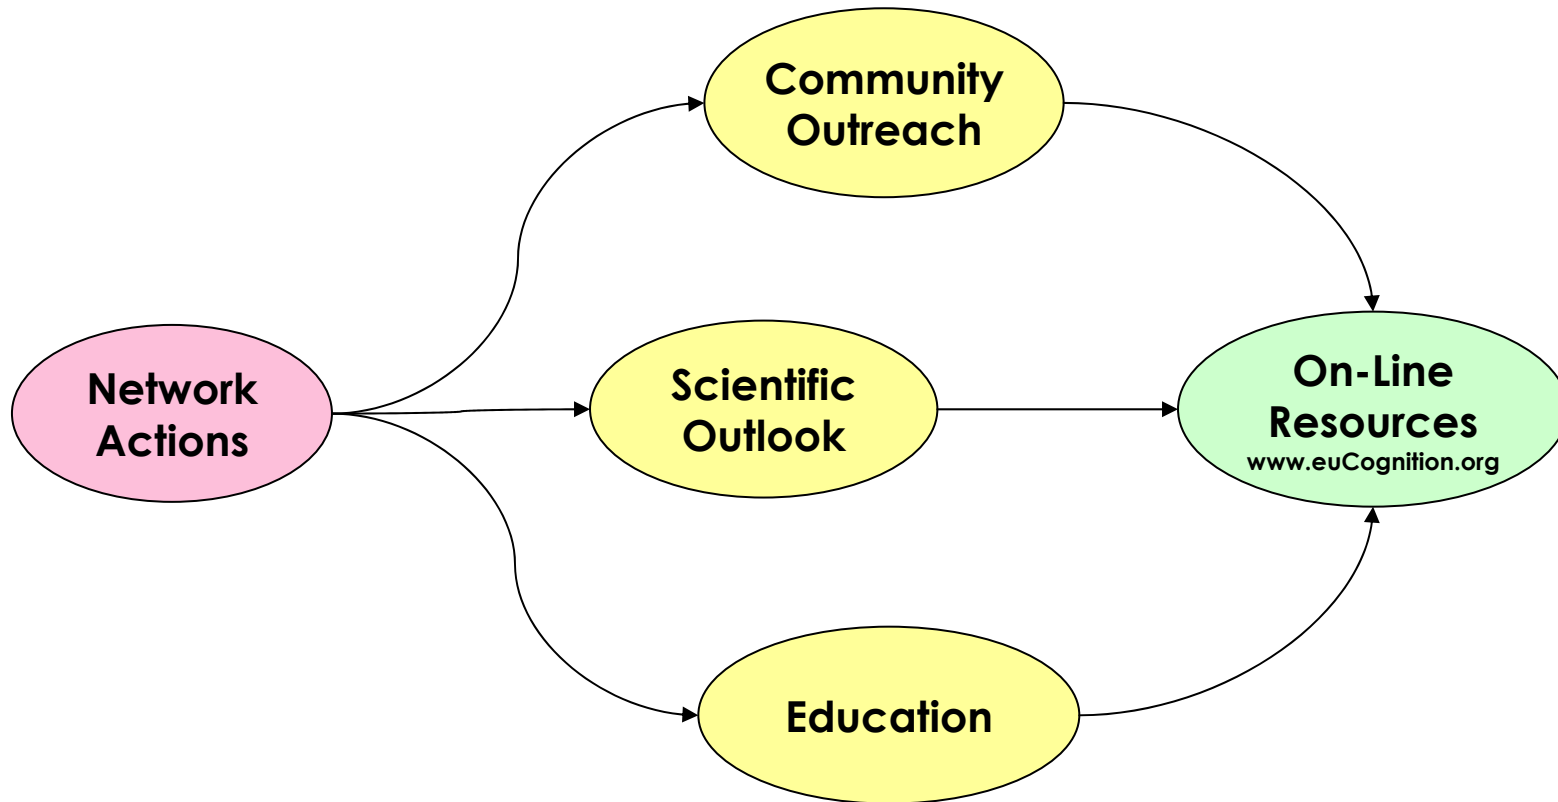

- Different perspectives
- Different languages
- Hard & Soft Science

### Mathematical Models

Activities

## Activities

How does it work?

## **Network Activities**

### **Community Outreach**

- Inter-project collaboration
- New blood from both academia and industry
- Exchanges, esp. with those not yet involved in funded projects
- Provide resources for new pilot initiatives

(e.g. providing access to platforms for experimental work in embodied cognition)

## **Network Activities**

### **Scientific Outlook**

- Research planning
- Refining and developing the our characterization of cognition
- Key focus: cross-fertilization of ideas

## **Network Activities**

### **Education**

- Address difficulties posed by the multi-disciplinary nature
- Bridge gaps between sub-disciplines
- Summer schools
- Creation of teaching material

# People and Forums

Three principal bodies are involved in the running of the network:

1. The Executive Committee
2. A CogSys Project Coordinators Round-Table Forum
3. The European Commission Project Officer(s)

Hans-Georg Stork  
Eva Benova  
Colette Maloney  
Bjoern Juretzki

## Executive Committee

David Vernon	Network Coordinator
Fred Cummins	University College Dublin
Markus Vincze	Technische Universitaet Wien
Tom Ziemke	Högskolan i Skövde
Erik Hollnagel	Linköpings Universitet
Christoph von der Malsburg	Ruhr-Universitaet Bochum
Bill Sharpe	The Appliance Studio Ltd.
Matthias Scheutz	Indiana University
Guy Tiberghien	Centre National de la Recherche Scientifique (CNRS)
Peter F. Dominey	Centre National de la Recherche Scientifique (CNRS)
Juergen Jost	Max Planck Institute for Mathematics in the Sciences
Andreas Engel	University Medical Center Hamburg-Eppendorf
Joanna Bryson	University of Bath
Barbara Caputo	IDIAP

## Project Coordinators Round-Table Forum

CoSy  
J  
P  
CLAS  
Decision-Motion  
DIRAC  
eTRIMS  
euCogni  
ERME  
M  
BIS  
PLUS  
RASCALLI  
SENSOPAC

# Mid-term Review Feedback

## Mid-term Review Feedback

- More summer schools
- Doctoral consortia
- More diversity on the Executive Committee
- Try to co-locate workshops at major conferences
- “Thinking about thinking is difficult unless you are thinking about something” ... learn from specific domains and address concrete examples
- The Sloman backward chaining model for research roadmaps has considerable merit; deploy it where possible

# Outcomes & On-line Resources

## **On-line resources**

1 Deliverable:

the resources on the euCognition website

[www.euCognition.org](http://www.euCognition.org)

(and the euCognition Wiki)

## **On-line resources**

[www.euCognition.org](http://www.euCognition.org)

- Dynamic (?) repository of resources: outreach, outlook, education
- Cognitive systems community
  - Research
  - Education
- Visibility in the greater community
- Show-case results & example validation experiments
- Forum for sharing information

## Membership

- Membership open to anyone who is active in the domain of cognitive systems
  - Submit membership application form
  - Subject to reviewed by Executive Committee ... cf proxy
- All those that are part of an FP6 & FP7 cognitive systems projects
- All members of ECVision ([www.ECVision.org](http://www.ECVision.org))
- Membership is personal not institutional
- No borders

## 'The Cognitive Systems Community'

- 376 Members (116 in July 2006, 219 July 2007)
  - Target: 120
- Of which, 104 Student Members (5 in July 2006, 46 July 2007)
- 253 members NOT formally associated with CogSys projects (57 in July 2006, 123 in July 2007)
- List on the website

### Members

We are 376 members strong. Why don't you [become a member?](#)

## Membership

- Non-labour costs incurred by member
  - Reimbursed directly by the coordinating contractor
  - Send in claim with travel receipts, reimbursed by electronic transfer within a month (or less)
- Labour costs
  - Member becomes a contractor
    - University of Edinburgh
    - University of Bristol

## **Membership**

- All members eligible to claim travel costs associated with official euCognition event
  - As advertized on the website
  - Subject to guidelines (more later)
- Eligible to apply for limited funding for Network Actions
  - Reviewed by Executive Committee
  - Final approval from Commission PO

## **Membership**

All members commit themselves to making a contribution to the network

# Second Six-Monthly Meeting

11-12 January 2007

Room K13

[Municon - Munich Airport Conference Centre](#)

A programme for the meeting can be found [here](#) (pdf - 0.17 Mb)

The afternoon of Thursday 11 January was devoted to a competition for student members of euCognition. Entrants made a 15 minute presentation on their cognitive systems research topics and a prize was awarded to the student(s) who gave the best (i.e. most engaging and informative) presentation. The prize is a grant to cover the costs of travelling to a cognitive systems workshop or conference of her/his choice, subject to a maximum value of 1000 euro (normal reimbursement rules) plus the cost of registering for the conference/workshop.

Friday 12th January was devoted to the euCognition Roadmap: our vision of the applications that are relevant to cognitive systems, and the scientific and technological advances that are needed to realize them. The roadmap will be requirements-driven and capability-led so that it provides both a vehicle for industry outreach and a forum for scientific outlook.

For more information, please see the euCognition wiki [here](#).

## SOCIAL COGNITION

A competition for student members of euCognition was held on the afternoon of Thursday 10th January. Friday 11th January was devoted to the theme of social cognition.

Entrants for the competition made a 15 minute presentation on their cognitive systems research topics and a prize was awarded to the student who gave the best (i.e. most engaging and informative) presentation. The prize is a grant to cover the costs of travelling to a cognitive systems workshop or conference of her/his choice, subject to a maximum value of 1000 euro (normal reimbursement rules) plus the cost of registering for the conference/workshop. The winner was Tom Froese, University of Sussex.

There is a printable version of the meeting agenda [here](#) (pdf - 40kb)

---

## Programme

---

### Thursday 10th January: Student Competition

14:30 Pick up badges

15:00 Student presentations

- Tom Froese, University of Sussex: [An enactive approach to social cognition](#) (pdf - 0.3 Mb)
- Jakub Gemrot, Charles University in Prague: [Pogamut 2 - a platform for fast development of virtual agents behavior](#)
- Jaime Gomez Ramirez, Universidad Politecnica de Madrid: [Naturalized epistemology for autonomous systems from a systemic approach](#)
- Carlos Hernandez, Universidad Politecnica de Madrid: [A proposal for a conscious cognitive architecture](#)
- Antoine Hiolle, University of Hertfordshire: [Attachment bonds for autonomous robot development](#)
- Filip Korc, University of Bonn: [Modeling spatial interactions for context-based image interpretation](#)
- Emilian Lalev, New Bulgarian University: [Simulated social dilemmas game playing in societies of anticipatory agents](#)
- Vincent Martin, INRIA Sophia Antipolis: [Cognitive vision: supervised learning for image and video segmentation](#)
- Alberto Montebelli, University of Skovde: [On cognition as dynamical coupling: an analysis of behavioral attractor dynamics](#)
- Maria Niessen, University of Groningen: [A computational model of sound recognition](#)
- Fabio Ruini, University of Plymouth: [Communication and distributed control in multi-agent systems. A neural network-based controller system for MAVs' swarms](#)
- Juraj Simko, University College Dublin: [Sequencing of abstract embodied gestures](#)

## Friday 11th January: Social Cognition

08:30 Pick up badges

09:00 Welcome

09:15 Fred Cummins, Executive Committee: [Consider the following ...](#) (pdf - 3.5 Mb) and [notes](#) (pdf - 28 kb)

09:30 [Stevan Harnad](#), Université du Québec à Montréal

10:30 Coffee Break

11:00 [Luc Steels](#), Vrije Universiteit Brussel

12:00 Panel and Audience Discussion

12:30 Lunch

14:00 Student Competition: presentation by winner & prize-giving

14:30 [Jordan Pollack](#), Brandeis University:  
[Beyond Competition in Evolution and Social Learning Communities](#) (pdf - 4.2 Mb)

15:30 Tea Break

16:00 [Michael Arbib](#), University of Southern California:  
[Invention and Community in the Emergence of Language: Insights from New Sign Languages](#) (pdf - 1.9 Mb)

17:00 Panel and Audience Discussion

18:00 Close

20:00 Dinner & After-dinner Speech  
[Jordan Pollack](#), Brandeis University:  
[Mindless Intelligence: The Ectomental Manifesto](#) (pdf - 2.2 Mb)

# Fifth Six-Monthly Meeting

27 June 2008

Room K13

[Municon - Munich Airport Conference Centre](#)

## The Role of Anticipation in Cognition

### Programme

- 09:00 Registration
- 10:00 David Vernon, euCognition Network Coordinator: Welcome & Overview
- 10:15 [Bernhard Hommel](#), University of Leiden:  
[Becoming an Intentional Agent: The Emergence of Voluntary Action](#) (pdf - 1.8 Mb)
- 11:15 Coffee
- 11:30 [Juergen Schmidhuber](#), TU München & IDSIA
- 12:30 Lunch
- 14:00 [Jun Tani](#), RIKEN Brain Science Institute, Japan
- 15:00 [Daniel Wolpert](#), Cambridge University:  
[Probabilistic models of human sensorimotor control](#) (pdf - 6.5 Mb)
- 16:00 Coffee
- 16:30 Panel and Audience Discussion
- 17:30 Close

---

### Associated Events

[ABiALS 2008 - The fourth workshop on Anticipatory Behavior in Adaptive Learning Systems](#), will be held at the same venue the day before the meeting on 26 June 2008.

A [Doctoral Consortium](#) will be held at the same venue the day after the meeting on 28 June 2008.

Both these events are [official euCognition events](#) and members may claim the travel and subsistence costs of attending them, subject to the conditions set out [here](#).

# Sixth Six-Monthly Meeting and Project Review

28 - 29 November 2008

[Hilton Molino Stucky, Venice](#)

---

## Cancelled

Due to an unforeseen and significant increase in expenditure, primarily due to the remarkable growth in membership and associated costs in funding travel to euCognition events, we no longer have enough funds to cover this meeting and we have been forced to cancel it. The review will be re-scheduled.

---

## Cognitive Systems: Achievements and Challenges

There is a printable version of the meeting agenda [here](#) (pdf - 0.10 Mb)

---

## Programme

### Official euCognition Events

#### [List of Official Events](#)

With a view to encouraging increased interaction between members and leveraging greater cross-fertilization of ideas in our community, the Executive Committee has agreed a policy to support the travel costs of members to designated *official euCognition events*.

The Executive Committee reserves the right to restrict the number of members who will be reimbursed the costs of attending official euCognition events.

**Members of euCognition who register for official euCognition events and who wish to apply for reimbursement of travel and subsistence costs (not registration fees) must seek the written approval of the Network Coordinator before booking flights or incurring any associated cost.**

If approval is given, then reimbursement of costs is subject to the normal euCognition guidelines and is conditional upon the member contributing a new cognition briefing to the euCognition wiki ([http://www.eucognition.org/wiki/index.php?title=Cognition\\_Briefings](http://www.eucognition.org/wiki/index.php?title=Cognition_Briefings)). The URL to the briefing must be provided on the submitted claim form and the claim will not be considered unless the cognition briefing has been contributed and prior approval has been granted. Cognition briefings that have been previously contributed, i.e. prior to attending the workshop, do not qualify. A different briefing must be contributed for each claim. The member is free to choose the topic of the briefing.

It is not necessary to contribute a cognition briefing when attending the six-monthly meetings and registration is taken to be a request for approval.

## List of Official Events

[6th euCognition Six-Monthly Meeting: Achievement and Challenges](#), Venice, 28-29 November 2008

[Workshop on Modelling Cognitive Behaviour \(in machines, organisms, organisations\)](#), Bristol, UK, 10 October 2008

[Workshop on Dynamic Field Theory: Applications in Cognitive Science and Robotics](#), Minho, Portugal, 8-9 September 2008

[Adaptive Mechanisms of the Perception-Action Cycle](#), Workshop in conjunction with the International Conference of Artificial Neural Networks (ICANN 2008), Prague, 6 September 2008

Summer School on Non-Linear Dynamics and Robots: From Neurons to Cognition, Madrid, 4-8 August 2008

[Workshop on Enactive Approaches to Social Cognition](#), PowderMills Hotel, Battle, UK, 30 August - 1 September 2008

[Eighth International Conference on Epigenetic Robotics: Modeling Cognitive Development in Robotic Systems](#) Brighton, UK, 31 July - 2 August 2008

[The Role of Emotion in Adaptive Behaviour and Cognitive Robotics](#) SAB '08 Workshop, Osaka, 11-12 July 2008

[Doctoral Consortium](#), Munich, 28 June 2008

[5th euCognition Six-Monthly Meeting: The Role of Anticipation in Cognition](#), Munich, 27 June 2008

[ABiALS 2008 - The fourth workshop on Anticipatory Behavior in Adaptive Learning Systems](#), Munich, 26 June 2008

[Course on Multimodal Signals: Cognitive and Algorithmic Issues](#) Vietri Sul Mare, Italy, 21-26 April 2008

[Workshop: Models of Thought: Post-Cognitivist Epistemologies](#) Munich, 20-21 February 2008

[4th euCognition Six-Monthly Meeting: Social Cognition](#) Venice, 10-11 January 2008

[Symposium on Language and Robots](#) Aveiro, Portugal, 10-12 December 2007

## The euCognition Wiki

Welcome to [euCognition](#), the European Network for the Advancement of Artificial Cognitive Systems. This wiki is dedicated to develop this emerging inter-disciplinary area.

euCognition is funded by the European Commission, [Unit E5 - Cognition](#), FP6 Project 26408.

# Controversies in Cognitive Systems Research

---

## Introduction

---

This is a place-holder for a forthcoming article on controversies in cognitive systems research.

It is not yet open for general editing and updates will be made by Aaron Sloman or David Vernon.

If you wish to express a view on a controversy or describe one, please contact one or both of these two people (contact details can be found below).

A temporary link to the draft list of controversies is [here](#) .

## Current Draft List of Controversies

---

- [Introduction](#)
- [How 'cognition' should be defined.](#)
- [Whether all mental and neural mechanisms should be regarded as dynamical systems, and modelled as such.](#)
- [The role of neural mechanisms.](#)
- [Symbol-grounding vs symbol-tethering](#)
- [Whether only bottom-up research and emergent phenomena can explain](#)
- [The Tabula Rasa Theory of Infant Learning](#)
- [Sensorimotor ontologies: Somatic vs Exosomatic](#)
- [Approaches to vision: image-based and scene-based](#)
- [Statistical vs structural models](#)
- [Concepts of causation required by intelligent systems: Humean or Kantian, or both?](#)
- [Do intelligent systems need emotions?](#)
- [What sort of architecture does an intelligent system need?](#)
- [What is Symbolic AI - should it be rejected? Is it needed?](#)
- [Is information always in the eye of the beholder?](#)
- [Should all learning and development be controlled by a single general purpose learning mechanism?](#)

## Cognitive Computer Vision

[\[edit\]](#)

This course was prepared by Kingsley Sage and Hilary Buxton at the University of Sussex. It focusses mainly on generative models and deals with such issues as Bayesian Networks, Gaussian Mixtures, and Hidden Markov Models. There are 15 lectures and slides for the entire course are available for download from the [ECVision](#) website.

## Statistical Pattern Recognition Toolbox

[\[edit\]](#)

This [toolbox](#) implements state-of-the-art pattern recognition methods in Matlab and is made available to the community under a very unrestrictive licence. The toolbox was mostly written by Vojtech Franc and has been maintained by him. The seed of the toolbox were methods from the book *Ten lectures on the statistical and structural pattern recognition*, by M.I. Schlesinger and V. Hlavac, Kluwer Academic Publishers, 2002. Since, the toolbox has developed much further.

Part of the toolbox documentation was written with the support from the project ECVision, predecessor of euCognition. This help is appreciated.

This page is maintained by Vaclav Hlavac. Last modification April 25, 2007.

## Human Vision System

[\[edit\]](#)

## Definitions of Cognition

---

The following definitions were contributed by members of euCognition in response to a [questionnaire](#) . If you haven't completed the questionnaire, please consider doing so.

The definitions are listed in the order in which they were submitted (newest first). See the entry at the end of this article for some thoughts on the validity and usefulness (or not) of this exercise.

Please add your own definition.

---

40. Cognition is the same as life. Life is not definable. As a living system operates it is making cognitive acts. Observer's eye sees all that stuff (including observer too).

Juan Escasany

---

39. Cognitive systems are machines capable of linking symbolic forms to the physical states of their material parts. They do so autonomously and inherently.

Sybe Rispens

---

38. Cognition: the algorithms and representations that determine fitness.

Tjeerd Andringa

---

37. Cognition falsifies the homunculus fallacy.

András Lőrincz

---

## Applications of Cognitive Systems

The following applications were contributed by members of euCognition in response to a [questionnaire](#). If you haven't completed the questionnaire, please consider doing so.

The applications are listed in the order in which they were submitted (newest first). See the entry at the end of this article for some thoughts on the validity and usefulness (or not) of this exercise.

Please add your own application.

- 
44. Feature and macro extraction that convert POMDP to MDP for (larger than) two agent learning scenarios -- the emergence of language.
  43. Intelligent brain-computer interfaces for disabled and paralysed persons.
  42. Cognitive extensions or cognitive prosthetic systems for the disabled (e.g., a summarizing reading machine for the visually-impaired that would let them quickly know if they want to read more).
  41. Image interpretation systems that would be able to learn, navigate, reason, revise knowledge, based on both visual information extracted from the image and symbolic knowledge and other heterogeneous information
  40. Intelligent agents
  39. An application that learned a new task from scratch (either by itself or through instruction) - as opposed to the traditional approach of "performance improvement" on a task pre-programmed by the designer.
  38. Dr. Who's K9
  37. Driver assist systems, autonomous navigation, systems that can model intentions, real-time realistic face/body animations, cognitive rehabilitation systems
  36. A system that can prompt old people with poor short-term memory when they forget what they are doing.
  35. A robot system capable of anticipation
  34. A simulation environment within which synthetic characters interact themselves and with their context, e.g. by means of gestures, voice and

## Cognition Briefings

Cognition Briefings are short articles written for a non-specialist audience. They aim to provide provide a quick and accessible introduction to a particular topic in cognitive systems with references or links for further reading. They are inspired by the [Brain Briefings](#) of the American Society for Neuroscience.

Please contribute a briefing on your favourite topic! We will be adding to this page on a continual basis throughout the life of the project. If you wish to contribute a briefing, but are unsure about questions of either form or content, feel free to contact [fred.cummins at ucd.ie](mailto:fred.cummins@ucd.ie) for guidance and help.

## **Network Actions**

- 2006
  - 26 Funded
  - 3 Declined
  
- 2007
  - 29 Funded
  - 6 Declined

31 Outreach  
39 Outlook  
13 Education
  
- 2008
  - 28 Funded
  - 2 Declined

## **Network Actions**

- Every action
  - (meeting, student exchange, tutorial, ...)
- Must have a concrete output in a persistent form
  - (document, video, commentary, ... )
- Archived on the eCognition website
- Reimbursement of costs conditional on submission
- Contribution of a 'Cognition Briefing' to the Wiki
- Contribution, where appropriate, to the Roadmap

## **Network Actions**

- euCognition does not give 'Grants',  
*i.e.* cash donations to support the running of events
- All we can do is help defray the actual costs incurred, *i.e.* we need receipts to show actual expenditure

## *The role of emotion in adaptive behaviour and cognitive robotics*

SAB '08 workshop, Osaka, Japan, 11-12 July 2008

### **Organizers**

Dr. Robert Lowe, (Robert.Lowe@his.se)

Dr. Anthony Morse, (Anthony.Morse@his.se)

Prof. Tom Ziemke, (Tom.Ziemke@his.se)

University of Skövde, Sweden

### **Scope of the workshop**

Affect and emotion have recently become a hot topic in the study of adaptive behaviour and embodied cognition in both natural and artificial systems. However, the regulatory role of affect/emotion, the underlying mechanisms, and the interaction between affective/emotional and cognitive processes are still not well understood. In order to develop a better understanding of the role of affect/emotion in adaptive behaviour and cognitive robotics, this workshop will bring together research on the following themes:

- *Affective Mechanisms* – This includes a range of mechanisms and concepts such as drives, motivation, reward, metabolic/homeostatic/allostatic regulation appraisal etc. We are particularly interested in

Two day Multi-Disciplinary Symposium  
at AISB'06 on UKCRC Grand Challenge 5:  
3rd to 4th April 2006

**GC5: Architecture of Brain and Mind:  
Integrating high level cognitive processes with brain mechanisms  
and functions in a working robot**

**NEWS 10 Dec 2006**

- **Research Roadmap Project in euCognition Network**

One of the important themes of this symposium was the need to identify long term requirements for satisfactory theories and working models, and to use those long term requirements to define a research roadmap. That is also the theme of an initiative that is part of the [euCognition network](#) (which funded this symposium). The roadmap initiative is described [here](#). It will be discussed on the second day of the [Second Six-Monthly Meeting](#) of euCognition at Munich Airport Conference Centre, 11-12 Jan 2007.

## Interviews with Cognitive Systems Practitioners

We are publishing interviews with leading researchers in cognitive systems on this site. We have asked researchers and experts about their area of research, why they became a researcher, and how they got into cognitive systems research in particular.

We have also asked what techniques they use and why these are important, what the major implications of their work are, who benefits from their research, what the most satisfying about cognitive systems research is, and what they think are the main challenges for the future.

## Main Page

### Cognitive Systems Outreach Wiki

Welcome to the Cognitive Systems Outreach Wiki. Cognitive systems are intelligent entities that exploit real-time cognition (they think for themselves) in behaving in interaction with their world. As a field, Cognitive Systems is a fast-developing new approach to understanding intelligent systems, and building artificial ones. It is founded on many different disciplines.

This page was set up as a part of [The Cognitive Systems Outreach Project](#). It is intended mostly for academics and other professionals involved in Cognitive Systems, so that we can share teaching and other material. We appreciate all contributions! Please create an account and login to edit these pages, using the link in the upper-right-hand corner. We appreciate additions and corrections to any of the projects and lists below. If you have any questions please contact [Veronica Sundstedt](#)  (Cognitive Systems Outreach Officer).

### Curriculum Project

An ideal curriculum for teaching a course on cognitive systems (natural and/or artificial) would have to embrace a huge number of topics. This wiki page has a list of topics related to cognitive systems with input from people working in the field. This is a suggested (non-exhaustive) list of topics related to cognitive systems inspired by the [model curriculum in the euCognition wiki](#). [This list of topics](#) is very much a work in progress. We hope that other researchers will modify it, build on it, argue over it, and develop it collaboratively into a useful shared resource.

## TUE-AM2

# Special Session I: Cognitive Systems of EU Cognition Programme

Organizer: Patrick Courtney

### Cognitive systems of EU cognition programme

Patrick Courtney

- A significant research programme in cognitive systems is now underway within the European Union with some €400M committed. This programme focuses on developing the technology and the necessary scientific understand to provide significant levels of autonomy and decision making into computer-based systems. Active research approaches in the area range broadly, from traditional rule-based AI, through to connectivist, dynamical and emergent systems and include embodied systems combining computing and robotic systems.
- One major practical motivation for the development of cognitive systems is to overcome the problems faced by traditional computer systems in dealing robustly with the uncertainties and changing demands that characterise the real world. Potential applications cited span a very broad range and have included care-giver robots, and easier-to-use interfaces. One major approach that has emerged has been in the use of open source platforms in order to share experiences and run larger scale experiments.
- This special session is dedicated to the development of the tools and methodologies that are in development within the EU, with an emphasis on the open source approaches with a view to performance analysis and comparison, and to stimulate discussion over cooperative research especially use of open platforms

### An Open-Source Simulator for Cognitive Robotics Research: The Prototype of the iCub Humanoid Robot Simulator

V. Tikhonoff, P. Fitzpatrick, F. Neri, L. Natale, G. Metta, A. Cangelosi

This paper presents the prototype of a new computer simulator for the humanoid robot iCub. The iCub is a new open-source humanoid robot developed as a result of the "RobotCub" project, a collaborative European project aiming at developing a new open-source cognitive robotics platform. The iCub simulator has been developed as part of a joint effort with the European project "ITALK" on the integration and transfer of action and language knowledge in cognitive robots. This is available open-source to all researchers interested in cognitive robotics experiments with the iCub humanoid platform

## Welcome to the RobotCub Summer School!

We are extremely grateful to the support of the euCognition network (<http://www.eucognition.org/>) which allowed us to accept several excellent candidates who would otherwise not have been able to fund participation in the school.

The RobotCub Summer School, "Veni Vidi Vici," serves to consolidate and disseminate skills in software engineering for humanoid robots. This year it was held in Sestri Levante, Italy, 21-30 July, 2008.

If you have any question or concern, please contact [summerschool@robotcub.org](mailto:summerschool@robotcub.org).

## Aim

The RobotCub Summer School, "Veni Vidi Vici", serves to consolidate and disseminate skills in software engineering for humanoid robots. Our goal is to foster long-lived academic collaboration on robot software across the boundaries and lifetimes of individual projects. The school is hosted by the

# Dynamic Field Theory & Applications

September 8-9, 2008  
Universidade do Minho, Braga, PORTUGAL

Main Conference

registration & fees

how to get here

accommodation

**Aims:** This workshop aims to provide a comprehensive overview on recent advances in Dynamic Field Theory and its application in Robotics and Cognitive Science. The main goal is to promote the exchange of ideas between researchers from different disciplines who are using (or want to use) Dynamic Fields as a theoretical framework for solving problems in Cognitive Science, Neuroscience and Robotics. The workshop brings together experts who have made important contributions in a theoretical and conceptual level or in the application domain.

**Local organisers:** Wolfram Erlhagen (Minho, Portugal), and Anwar Hussein (Minho, Portugal)

**Location:** Edifício dos Congregados, Avenida Central, Braga, Portugal.

**Financial Support:** The event is an official euCognition workshop. Members who attend are eligible to claim their travel and subsistence costs.

**Participation:** People who wish to participate either to learn more about Dynamic Field Theory or to give a presentation should contact Wolfram Erlhagen by June 15 2008.

## Speakers

Estela Bicho (Minho, Portugal). *A dynamic neural field architecture for flexible and fluent human-robot interaction.* [abstract](#)

Steven Coombes (Nottingham, UK). *Bumps, breathers, and waves in a neural network with threshold accommodation.* [abstract](#)

Raymond Cuijpers (NICI Nijmegen, The Netherlands). *Bayesian decision making using neural fields.* [abstract](#)

Alexander Gepperth (Honda Research Institute, Germany). *Neuro-dynamic systems for real-world*

## International Conference on Cognitive Systems (CogSys 2008)

University of Karlsruhe, Karlsruhe, Germany  
April 2 - 4, 2008

The 2008 International Conference on Cognitive Systems will be held on April 2 to 4, 2008 in Karlsruhe, Germany. The conference series started in Bled, Slovenia in the year 2004 and traveled to Nijmegen, Netherlands in the year 2006. Both events were organized to share the progress that had been made in the research community around the sponsored [European projects](#) within the area of Cognitive Systems.

CogSys 2008 will be held in Karlsruhe as the first international conference on cognitive systems. The conference will bring together researchers from different fields to identify current research trends, to present and to review recent work and to speculate about the future of cognitive systems.

## Connect with AI

We have developed a simple yet "intelligent" robotic platform to interact with the public and generate interest and discussion. Several of these autonomous Connect4 playing robots have been constructed for use as demonstration tools at university open days, science festivals and school visits. The robots have proved to be a great success in capturing the interest of children and adults alike. The simple idea of having a robot playing a popular game against human opponents in the real world appeals to a broad spectrum of people including those who have had no previous interest in artificial intelligence.

As the robot platform integrates work from machine vision, artificial intelligence and robotic control, it has allowed staff manning demonstrations to:

- engage people in discussion about each of these fields,
- provide an opportunity to get people to think about how computers' abilities differ from our own
- give them a brief exposure to the world of cognitive science and artificial intelligence.

## Scope

### >> Workshop Program <<

The capacity to attend to the relevant has been part of AI systems since the early days of the discipline. Currently, with respect to the design and computational modeling of artificial cognitive systems, selective attention has again become a focus of research, and one sees it important for the organization of behaviors, for control and interfacing between sensory and cognitive information processing, and for the understanding of individual and social cognition in humanoid artifacts.

While visual cognition obviously plays a central role in human perception, findings from neuroscience and cognitive psychology have informed us on the perception-action nature of cognition. In particular, the embodiment in sensory-motor intelligence requires a continuous spatio-temporal interplay between interpretations from various perceptual modalities and the corresponding control of motor activities. In addition, the process of selecting information from the incoming sensory stream, in tune with contextual processing on a current task and global goals, becomes a challenging control issue within the viewpoint of focused attention. Seemingly attention systems must operate at many levels and not only at interfaces between a bottom-up driven world interpretation and top-down driven information selection. One may consider selective attention as part of the core of artificial cognitive systems. These insights have already produced paradigmatic changes in several AI-related disciplines, such as, in the design of behavior based robotics and the computational modeling of animats.

Within the context of the engineering domain, the development of enabling technologies such as autonomous robotic systems,

## Workshop Overview

- A cross-disciplinary meeting at ECAL2007
- This is a two day workshop to be held as an associated event of the ECAL2007 conference. It will take place in the [CCB - Belem Cultural Centre](#), on the 9th and 10th of September 2007. The second day is part of the main conference's workshops.

**Studying** development is about understanding change. Development itself is a consequence of intertwined processes that occur in time and at multiple levels of analysis. Development is more than growth, maturation or the unfolding of a predefined program. Under the microscope of detailed empirical studies in animals and humans, ontogeny shows some of the same qualitative properties of complex adaptive systems (e.g. self-organization, non-linear dynamics, multicausality).

For this workshop we have brought together researchers of both natural and artificial systems to discuss the nature of developmental change and its role in understanding the behavior of intelligent systems. Specific examples that illustrate the multileveled and multi-time scaled nature of developmental change are present throughout the workshop.

The broad topics of the invited talks cover the nature of psychological development, both at the behavioral and biological levels, the broadest time scale of change (evolution) and its bidirectional relationship to development, dynamical field theory as a approach to understanding development and studies of development in artificial systems, both in robotic platforms and in artificial life models. The workshop will include ample time for discussion and two small-group brainstorming activities.

## Battle08

# Workshop on Enactive approaches to Social Cognition

Aug. 30 - Sep. 1, 2008 (mid-Sat. to mid-Mon.)

Battle, near Hastings, East Sussex, UK

- For details of all the participants click [here](#).
- For information about the workshop program, suggested reading material, directions to venue, etc., please click [here](#).

There is a growing consensus in the cognitive sciences that cognition is best understood as an embodied-embedded dynamical process which spans a systemic whole consisting of an agent's brain, body and world. This has had significant consequences for modeling cognitive behaviour, but has not yet been addressed much in the modelling of social interactions, which is still strongly influenced by the traditional

## Cognitive Systems Industry Day

### Call for Participation

**January 29th 2008, Schloss Birlinghoven, Sankt Augustin, Germany**

#### Purpose of the Cognitive Systems Industry Day

- to present several representative R&D projects in the area of Cognitive Systems and Robotics
- to give an introduction to the European Commission's Cognitive Systems and Robotics research strategy
- to provide an opportunity for discussions between industry and scientific community.

#### Participation

The targeted audiences are stakeholders from industry that are interested to learn about the current state of the art in Cognitive Systems and Robotics.

The participation in the event is free, but a registration is required.

## Home

In the past 7 years, the Epigenetic Robotics annual conference has established itself as a unique place where original interdisciplinary research from developmental sciences, neuroscience, biology, cognitive robotics, and artificial intelligence is being presented.

Psychological theory and empirical evidence is being used to inform epigenetic robotic models, and these models can be used as theoretical tools to make experimental predictions in developmental psychology.

As in previous years, we encourage submissions from researchers whose work broadly intersects the fields (and subdisciplines) of developmental science, robotics, and neuroscience. As a special feature, this year we are also highlighting a specific organizational theme: evolution and development as related processes of change.

The particular focus of this theme is on the dynamic interplay between ontogeny and phylogeny. In other words, how do new abilities and skills that emerge during development influence the path of evolution, and how do subsequent evolutionary changes help to create new developmental trajectories? This is a question that fits well within the mission of epigenetic robotics, as it spans not only a wide range of research areas and academic disciplines (e.g., biology, psychology, AI and machine learning, linguistics, anthropology, etc.) but also a broad spectrum of spatial and temporal scales (e.g., neurons, brains, social communities, cultures, etc.).

We are especially interested in submissions that will enhance the emerging dialog between evolutionary and developmental perspectives. Relevant topics include, but are not limited to:

- Artificial embryology
- Morphogenesis, differentiation, and regulation
- Behavioral inheritance and social learning
- The evolution of language acquisition
- Phylogenetic constraints on perceptual processing (e.g., face perception)

## Research Roadmap

One of the main goals of the euCognition network is to create a research roadmap that will help identify the functional and non-functional attributes of cognitive systems and focus attention on key scientific challenges in realizing them.

### Plan A

Our original plan was to create the research roadmap in a variety of ways. Based on a canvass of the views of members of euCognition and staff in the EU Commission Cognition, Interaction, and Robotics unit, the Executive Committee agreed a specific [Research Roadmap Agenda](#), including an exposition of the purpose of the roadmap, the approach to be used in developing it, the required outcomes, and an outline plan.

### Plan B

However, in the immediate follow-up to the [Roadmap Kick-off Meeting](#) at the [second six-monthly meeting](#) in January 2007, it became clear that the [challenge of creating a research roadmap](#) was much greater than we had first thought, in terms of scope, complexity, and the effort required to complete the roadmap. Consequently, it was decided to rescope the goal and in March 2007 the Executive Committee adopted an [Alternative Research Roadmap Agenda](#) with a three-pronged approach, including interviews with key researchers, a series of debates, and a survey of all members of euCognition.

This three-pronged approach should be seen as a sort of middle ground between the conventional forward-chaining approach to road-mapping and backward-chaining approach favoured in the original [Research Roadmap Agenda](#).

Plan B represented a shift in strategy, emphasizing less the development a full-blown roadmap and focusing more on a *Learning Journey*: a series of actions that support the evolution of the discipline through the sharing of viewpoints and increased interaction among the diverse set of stakeholders. To date Plan B be has not been put into effect.

### Plan C

[Research Roadmap Agenda](#) with a three-pronged approach, including interviews with key researchers, a series of debates, and a survey of all members of euCognition.

This three-pronged approach should be seen as a sort of middle ground between the conventional forward-chaining approach to road-mapping and backward-chaining approach favoured in the original [Research Roadmap Agenda](#).

Plan B represented a shift in strategy, emphasizing less the development a full-blown roadmap and focusing more on a *Learning Journey*: a series of actions that support the evolution of the discipline through the sharing of viewpoints and increased interaction among the diverse set of stakeholders. To date Plan B be has not been put into effect.

## Plan C

To bootstrap the *Learning Journey* process, members of the Executive Committee volunteered to organize a series of workshop over the remaining period of the project. The titles of these workshops are as follows.

- [Extracting Requirements of a Cognitive Architecture](#) from research in human cognitive development (Peter Ford Dominey)
- [The Role of Information in Cognition](#) (Jürgen Jost)
- [Mechanisms of coordination in a cognitive system](#) (Christoph von der Malsburg & Andreas Engel)
- [Applications, Requirements, Capabilities](#) (Erik Hollnagel & Patrick Courtney)
- [Attention, Vision, Robotics, and Cognitive Systems](#) (Markus Vincze)
- [Affect and Emotion in Cognition](#) (Tom Ziemke)
- [Cognition and Culture: the enactive approach](#) (Bill Sharpe & Fred Cummins)

## Learning Journey: Extracting Requirements of a Cognitive Architecture

Venue: Lyons

Date: October 27, 2007

Participants: Giorgio Metta, Patrick Courtney, Peter Ford Dominey, Felix Warneken, Collin Bannard

Organized by: Peter Ford Dominey

Report written by: Peter Ford Dominey

The workshop took place over two days - October 22 and 23. It addressed how research from the developmental cognitive sciences can be analysed in order to extract requirements on cognitive systems. We invited Felix Warneken who is a developmental cognitive scientist from the MPI-EVA in Leipzig, along with Collin Bannard - a developmental computational linguist, to interact with cognitive roboticists and systems people. The workshop was quite insightful.

The main conclusions are summarized here:

[1] 

Related to this activity, we present an example case study here:

[2] 

Presentations from the workshop will be available soon.

- [1 Information](#)
- [2 Bayesian decision theory and information processing](#)
- [3 Constraints](#)
- [4 Neural networks](#)
- [5 Evolution](#)

## Information [\[edit\]](#)

According to Shannon, information is reduction of uncertainty about specific signals drawn from a known distribution. Information theory is a tool for deriving bounds and checking for optimality.

## Bayesian decision theory and information processing [\[edit\]](#)

Bayesian decision is a provably optimal method for taking decisions on the basis of incomplete information. Bayesian parameter estimation avoids the problem of overfitting. Thus, Bayesian schemes yield formal methods against which actual performance of both neural and artificial cognitive systems can be compared.

The question is whether, how, and in particular at which scale (individual synapses or neurons, populations of neurons, entire brains) such schemes

## Learning Journey: Applications, Requirements, Capabilities

Venue: Ecole des Mines, Paris

Date: March 20, 2008

Organized by: Patrick Courtney, Bill Sharpe, and Erik Hollnagel

### Executive Summary

A significant research programme in cognitive systems is now underway. This focuses on the developing and technology and the necessary scientific understand to provide significant levels of autonomy and decision making into computer-based systems. Active research approaches in the area range broadly, from traditional rule-based AI, through to connectionist, dynamical and emergent systems and include embodied systems combining computing and robotic systems.

One major practical motivation for the development of cognitive systems is to overcome the problems faced by traditional computer systems in dealing robustly with the uncertainties and changing demands that characterise the real world. Potential applications cited span a very broad range and have included care-giver robots, and easier-to-use interfaces. In order to make link with the developing discipline of cognitive systems, a new level of multidisciplinary dialogue on the centre ground is needed to build the concepts and community of Cognitive Systems. The objective on this activity is to identify stepping stones between applications and research into cognitive systems.

The domains of aerospace and automotive are examined with a view to identifying how the issues of autonomy and decision making are addressed, and trends which call for increased autonomy. Two specific areas are selected for further discussion: context-aware detection; and the coordination of multiple cognitive agents using contracts. Other possible areas are briefly indicated and potential next steps are suggested.

The full report is available here: [\[1\]](#)

# Learning Journey: Attention, Vision, Robotics, and Cognitive Systems

Venue: Santorini

Date: 15 May 2008

Participants: Monique Thonnat, Ute Bauer-Wersing, Antonis Argyros, Jannik Fritsch, John Tsotsos, Heiko Wersing

Report written by: Markus Vincze

**Contents** [\[hide\]](#)

- 1 [Goals](#)
- 2 [Scientific Challenges](#)
- 3 [Recommendations for Implementation](#)
- 4 [Reference](#)

## Goals

[\[edit\]](#)

The attempt was to discuss where there are areas of imminent need for work or what might be limits to really advance the field. It was a rather free discussion. Given the mix of people subdisciplines such as vision and robotics have been stressed on purpose. The summary below first lists scientific challenges and second recommendations for implementation.

## Scientific Challenges

[\[edit\]](#)

- **Need to understand:** there is a lack of understanding the underlying concepts in many areas related to vision and their relation to behaviours, functions and tasks. However, such an understanding is necessary to explain the phenomena and replicate them in an artificial cognitive system.
- **Semantic abstraction:** while data can be hierarchically clustered, mined or other nice things done with it, there is still a gap from data to semantics and an abstraction in terms of semantic concepts that relate to data. This also includes a clear definition of semantics. And it applies not only to vision and robotics but all sensors or other parts of cognitive systems.
- **Is engineering different?** Building an artificial cognitive system might require also other sorts of "understanding", namely more specific to showing the replication of what has been understood. Nevertheless, there needs to be a more scientific approach to show this. (See next)

## Affect and Emotion in Cognition

Venue: Osaka, Japan

Date: 11-12 July 2008

Organized by: Robert Lowe, Anthony Morse, Tom Ziemke, University of Skövde, Sweden

Report written by: Tom Ziemke

**Contents** [\[hide\]](#)

- [1 Facts & figures](#)
- [2 Scope of the workshop](#)
- [3 Speakers](#)
- [4 Further information](#)

### Facts & figures

[\[edit\]](#)

The workshop on *"The role of emotion in adaptive behavior and cognitive robotics"* was held July 11-12 in Osaka, Japan, in connection with the SAB 2008 conference [\[1\]](#) . Approximately 25 researchers participated, including three invited speakers (Lola Canamero, Ron Chrisley, Marc Lewis) and six (other) euCognition members (Bartneck, Inderbitzin, Manella, Murray, Raif, Rank) whose participation was supported by euCognition.

### Scope of the workshop

[\[edit\]](#)

Affect and emotion have recently become a hot topic in the study of adaptive behaviour and embodied cognition in both natural and artificial systems. However, the regulatory role of affect/emotion, the relevant underlying mechanisms, and the interaction between affective/emotional and cognitive processes are still not well understood. In order to develop a better understanding of the role of affect/emotion in adaptive behaviour and cognitive robotics this workshop brought together approximately researchers working on affective mechanisms, emotional agents, as well as social interaction & human-robot interaction.

## Cognition and Culture: the enactive approach

Venue: [Watershed Media Centre](#), Bristol, UK

Date: June 2009

Organized by: Fred Cummins and Bill Sharpe

The workshop was scheduled to run in December 2008, but due to the financial situation in euCognition the budget became too constrained for us to be able to commit to the costs in time to secure the participation of some of the key international participants. We have therefore postponed the workshop until June 2009 and will submit a proposal to euCogll. Below is the call that we sent out. We secured commitments to attend from our target of about 25 people from a wide range of backgrounds including cognitive systems, anthropology, media and arts.

A [workshop web site](#) has been set up where people can register their interest.

### Cognition and Culture: an enactive view

[\[edit\]](#)

The enactive approach to understanding cognitive systems is relatively new. Within that approach, a set of concepts and a novel vocabulary are being collectively refined that allow new ways of understanding complex systems that arise, are maintained, and die within complex environments, and how meaning arises for agents within them. We believe these tools and this vocabulary may be of use to researchers in allied fields, including but not limited to arts, media and cultural studies, anthropology, economics, and sociology, and will promote mutual learning amongst them all. A central issue of interest that brings these disciplines together is the notion of 'value' and how this can be viewed as the dynamic structural relationships between identity and context. Further details of the research orientation are below.

This workshop is intended to start the dialogue, and it is hoped it will be the first of three annual meetings that will play a significant role in creating a new level of interdisciplinary research enquiry. Attendance will be limited to 25 people and we are looking to balance the interest from different disciplines and find people who will have a strong interest in continuing the research conversation after the meeting. The agenda of follow-up activities will be developed by all the attendees as a part of the workshop.

Organisers:

[Fred Cummins](#), Univ College Dublin

# euCognition's Financial Crisis

## **euCognition's Financial Crisis**

- Aug 2008: review of finances
  - Commitments > budget (1599916)
  - Claims > pre-financing
  - Limited budget
  - Cash flow

## **euCognition's Financial Crisis**

- Budget
  - Y1: 21% of total spent
  - Y2: 45% of total spent
  - Y3: comfortable (so I thought)
  - But ... in Year 3
    - Many legacy claims Y1 & Y2
    - Dramatic increase in official event participation

## euCognition's Financial Crisis

- Cash-flow
  - Skewed expenditure (Y1 & Y2)
  - No pre-financing payment Y2
    - 70% rule: new pre-financing iff expenditure > 70% existing pre-financing
  - Cash-flow crisis
    - No money to reimburse members / guests claims
    - August 2008: 150 outstanding claims

## **euCognition's Financial Crisis**

- Cash-flow Solution
  - Supplementary management report
  - Supplementary financial statement
  - Y2 pre-financing released
  - Cleared 150 claims
  - Pre-financing now depleted again
  - All new claims will have to wait

## **euCognition's Financial Crisis**

- Budget Solution
  - Detailed analysis of historic, committed, projected costs
  - All planned activities cancelled
    - Final meeting
    - Network Action programme
    - Official Event programme
  - All members contacted to request reduction in costs
  - Several members of Exec. Committee agreed not to claim costs for effort

Looking Back

## **Looking Back**

- Members don't read guidelines
- Members can't add
- Executive Committee too large
- Rotating responsibilities in the Executive Committee doesn't work
- Admin overhead is huge: networks scale badly
- Part-time web admin doesn't work
- Contractors don't familiarize themselves with contract minutiae
  - Annual reporting (financial, coordination, management)
  - Gets worse when finance people get involved ... 1 point of contact
- Contract amendments are a real pain
- Management effort scales badly with number of contractors
  - Use sub-contracts for additional effort

## **Looking Back**

- Light-weight reimbursement procedure works well
  - But need a "statute of limitations" for claims
- Six-monthly meetings are great for community-building
- Small network actions leverage disproportionate benefits
- Official euCognition Events great but need careful management
- The 'no research' rule doesn't really make a lot of sense
- Cognition briefings: good vehicle for member involvement but, again, need better editorial oversight

Remaining Work

## **Remaining Work**

- 40-60 outstanding claims
- Pre-financing fully depleted ... dependent on final payment for remaining reimbursements
- Periodic activity report
- Periodic management report
- Form C financial statements
- Critical to get these done ASAP

Looking Forward

## **Looking Forward**

- Handover to EU Cog II
- Consolidation of
  - euCognition website & wiki
  - Bath website & wiki
- Continue to build the cognitive systems community
  - Coalescence needed
  - The Roadmap!!!  
"Thinking about thinking is difficult unless you are thinking about something"
- Did we achieve what we set out to? Yes and No ...
- Was it worth it?
  - Ask the members ...
  - And the reviewers ...
  - And the Commission

# Final Thought

"The real journey of discovery  
consists not in seeking new landscapes,  
but in having new eyes"

Marcel Proust (1871-1922).
